Allowable Subject Matter

1. Claims 1-17 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - The outboard flap of Lewis is used to decrease the total forces on the wing and is stronger than the inboard flap when they are both in the same angular position.
 - Lam et al (6,554,229), Lam et al disclose an aileron for a fixed wing aircraft, however does not teach operating one control surface with priority over another control surface and does not generate a force on the stability element that is less than the force generated on the stability element by the second control surface, when the first and second control surfaces are in the same angular position.
 - Borzachillo (4,146,200): Borzachillo does not disclose generating a force on said stabilizer element which is lower than the force generated by the second control surface element for the same turn angle of said first end second control surface elements, and further regarding claim 15:
Borzachillo does not teach electrically controlled flaps, two actuating means from only one actuator (see claim 15) and does not have a phase determining means (regarding claim 15).
